## **12v 7ah inverter**

## Overview

---

What is a 12V inverter?

A 12V inverter is a device that converts 12V DC electric from your leisure batteries into the standardised AC current in your country of origin (120AC for the states, 240AC for the UK). It integrates into the electrical setup inside your campervan.

How long can a 7AH battery power a 12 watt fan?

A 12v fan can be run directly from a 7AH battery, which provides 84 watt-hours of power nominally. Therefore, the fan could run for approximately 7 hours without considering deep discharging. However, deep discharging a lead acid battery is not recommended, so the battery could only repeatedly power the 12 watt fan for 3.5 hours.

How long can a 7Ah battery run?

A 12v 7Ah battery has a nominal capacity of 84 watt-hours. This would run a 12 watt load for approximately 7 hours. However, deep discharging a lead acid battery is not recommended, so the 7Ah battery could only repeatedly power a 12 watt fan for 3.5 hours. This calculation assumes 100% efficiency of the inverter. Keep in mind that this is an approximate value.
