## **Battery cabinet wake-up power supply does not respond**

## Overview

---

How do I know if my ups is working on battery?

When the unit is started off its battery it will indicate it is using its battery to power the unit. If the UPS works on battery, plug it's power cord into the wall and see if it works online.

What if my ups does not respond?

Please follow the below troubleshooting steps if your UPS does not respond. • Back-UPS not connected to an AC power source. • Check the battery connection. Per Department of Transportation regulations, we ship all of our UPS products with one battery lead disconnected.

Why is my laptop not waking up?

Note: If you are using a battery-powered device, ensure it is connected to a power source and that the battery charging indicator is illuminated (as exemplified by the laptop in the image below) to avoid failure to wake due to battery depletion. Then, attempt to press the power button to wake the device.

Why does my laptop not turn on when connected to a docking station?

Try pressing the power button briefly, move the mouse, connect the charger. Update the BIOS or UEFI firmware, and install the latest drivers if the issue persists. 16. Why won't my laptop turn on when connected to a docking station?

Power Supply: Ensure the docking station is connected to a working power outlet. Try using a different power outlet.

Can a gigabyte PSU wake up a PC?

\* from BIOS, disable CPU C6 and C7 sleep states. Since what it looks like, is that for some reason, that Gigabyte PSU isn't compatible with higher sleep

states and is incapable of waking up PC. Also, it's strange that modern PSU would have such an issue.

How do I check if my back-ups works on a battery?

If the UPS works on battery, plug it's power cord into the wall and see if it works online. Check the wall outlet that supplies power to the Back-UPS using a table lamp. If the lamp bulb is very dim, consider adjusting the transfer voltage on the UPS Disconnect non-essential equipment from the Back-UPS.
