What is a base station in radio communications?

In radio communications, a base station is a wireless communications station installed at a fixed location and used to communicate as part of one of the following: a wireless telephone system such as cellular CDMA or GSM cell site. Base stations use RF power amplifiers (radio-frequency power amplifiers) to transmit and receive signals.

What is a base station in a mobile network?

The base stations represent the radio part of the mobile network, and one base station typically contains multiple cells which operate on specific radio frequencies. The radio network is what connects a mobile phone to the mobile network.

What is a GSM base station?

In the second generation of mobile networks powered by GSM technology, the base stations are called Base Transceiver Stations or BTS for short. The word transceiver refers to the fact that the base station is doing a dual job of being a transmitter and a receiver, hence the term trans + ceiver.

What are the different types of base stations?

In US licensing jargon, types of base stations include: A fixed station is a base station used in a system intended only to communicate with other base stations. A fixed station can also be radio link used to operate a distant base station by remote control.
