

Disadvantages of solar-powered signal base stations

Overview

What are the disadvantages of solar energy?

So, let's have a close look at the 10 biggest disadvantages of solar energy. 1. Lack of Reliability Solar energy is far from being reliable compared to other energy sources like nuclear, fossil fuels, natural gas, etc. Since solar energy depends on sunlight, it can only produce energy in the daytime.

Are solar powered cellular base stations a viable solution?

Cellular base stations powered by renewable energy sources such as solar power have emerged as one of the promising solutions to these issues. This article presents an overview of the state-of-the-art in the design and deployment of solar powered cellular base stations.

Are solar cellular base stations transforming the telecommunication industry?

Improved Quality of Service and cost reduction are important issues affecting the telecommunication industry. Companies such as Airtel, Glo etc believe that the solar powered cellular base stations are capable of transforming the Nigerian communication industry due to their low cost, reliability, and environmental friendliness.

Is solar energy inefficient and unreliable?

For a country that already uses too much water for farmers, it is nearly impossible to use that much amount of water to produce solar energy. Considering the above-mentioned disadvantages of solar energy, it is safe to say solar energy is inefficient and unreliable.

Are solar panels a viable alternative energy source?

The cost of solar panels may seem reduced over the years, but we must look at the fact that the solar industry is standing tall on subsidies and mandates from governments. Limited environmental benefits do not make solar energy an alternative energy source, it must be consistent and reliable.

How efficient are solar panels?

The efficiency rating of old solar panels installed in the 2000s is below 15%. Even the modern ones are only able to convert 30% of solar energy to usable power. If we consider the most efficient solar energy systems which rotate with the sun's position, theoretically, even they only have an efficiency rating of 85%.
