Double-glass photovoltaic module price

Overview

Are solar modules still priced above €0.60?

The prices for solar modules available on the market, such as those from SolarWorld or Sonnenstromfabrik, are still trading above the €0.60 mark. Other companies are constantly working to optimize the performance and efficiency of their modules.

Are First Solar modules available?

On the open market, First Solar modules are virtually unavailable or, if so, only after a long wait. First Solar is currently launching Series 6, which it says is a particularly economical module.

Are photovoltaic module prices decreasing?

Recent investigations confirm that the end of photovoltaic module price declines was apparent within the last few months. While the average price level was still slightly decreasing at the start of 2013, compared to December 2012, a trend reversal was already visible at the end of January.

How many solar cells are in a photovoltaic module?

Photovoltaic modules typically feature 60 cells. They also come with standard aluminum frames, white backsheets, and a power output ranging from 275 to 325 Wp.

Why are solar modules expensive?

The current high prices of solar modules are due to artificial bottlenecks caused by market regulations in the U.S. and Europe. This shortage of inexpensive modules has led to stagnation in prices. However, the market is now facing a glut of modules, which will inevitably cause prices to fall.

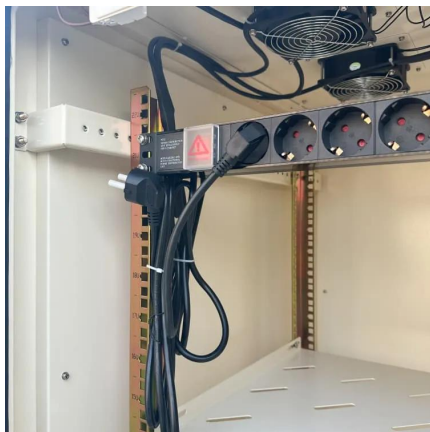

What is the cost of buying Chinese solar modules?

The price of Chinese solar modules has increased, with well-known brands now available at around €0.60/Wp. However, there is a waiting period for delivery as they must first be brought out of China.
