

Georgia Solar Panel Integration

Overview

Is Georgia a good state to install solar panels?

With higher than average electricity prices and abundant sunshine, Georgia's a pretty great state for solar energy. It may not have the best local solar incentives, but as a Georgian, you can still take advantage of solar's most valuable incentive, the Federal Tax Credit. Here's what you should know about installing solar panels in the Peach State.

Does Georgia Power offer solar?

From home installation and our buy back program, to non-installation options, our goal is to make solar an option for every Georgia Power customer. Learn more about our behind-the-meter solar programs, including the new Renewable and Nonrenewable Resources (RNR) program, and how to interconnect your system.

Does Georgia Power Company offer a solar extension program?

The Public Service Commission Order pertaining to Dockets 4822, 16573, and 19279 states that Georgia Power Company is to provide existing solar participants the option to extend the term of their current Distributed or Utility Scale generation for up to 35 years. Please select from the following options for more information surrounding your program.

How much do solar panels cost in Georgia?

Solar panels will save you a lot of money over time, but the upfront costs aren't cheap. The average Georgia homeowner needs a 12.35 kW solar panel system to cover their electricity needs, which comes out to \$31,703 before incentives. Prices range from \$26,948 to \$36,458, but after the federal tax credit, that drops by 30%.

How do I choose the best solar program?

Get real life figures to help you determine the best solar program for you and

your goals. Reduce your carbon footprint with RECs. No solar panels required. There is no way to distinguish what part of the electricity at your location came from what energy source in our diverse fuel portfolio.

How much power does a solar panel produce per square foot?

Each year, solar panels get more and more efficient —that is, they produce more power per square foot. As of 2025, the most popular solar panels can produce about 450 watts of electricity when they're in full sunlight. If you want to make the most of your roof's solar potential, get panels with at least that much power output.
