Could a new energy storage concept transform tall buildings into batteries?

IIASA researchers have come up with a new energy storage concept that could turn tall buildings into batteries to improve the power quality in urban settings. Article republished from International Institute for Applied Systems Analysis (IIASA).

How is energy stored in a building?

It relies on the use of elevators in buildings to lift solid masses in charging mode. It lowers the same mass to produce electricity in discharge mode. "Energy is stored as potential energy by elevating storage containers with an existing lift in the building from the lower storage site to the upper storage site," the scientists said.

Can lifts and empty apartments store energy?

In their study published in the journal *Energy*, IIASA researchers propose a novel gravitational-based storage solution that uses lifts and empty apartments in tall buildings to store energy.

Can hybrid photovoltaic and wind energy systems be used in high-rise buildings?

Techno-economic-environmental feasibility is analyzed applied in high-rise buildings. This study presents a robust energy planning approach for hybrid photovoltaic and wind energy systems with battery and hydrogen vehicle storage technologies in a typical high-rise residential building considering different vehicle-to-building schedules.

Will Energy Vault transform tall buildings into 'Big batteries'?

In May 2024, Energy Vault, a company specializing in grid-scale energy storage, announced a global partnership with Skidmore, Owings & Merrill (SOM) to transform tall buildings and superstructures into 'big batteries' using

the technology called gravity energy storage systems (GESS).

What is lift energy storage technology?

Lift Energy Storage Technology is a proposed long-term storage solution that relies on elevators to bring solid masses to the tops of buildings in charging mode. It then lowers the same mass to produce electricity in discharge mode. Image: Federal University of Espírito Santo, Energy, Creative Commons License CC BY 4.0
