Installation of free-standing solar panels

Overview

How to install ground-mounted solar panels?

When you decide to have ground-mounted solar, you have two options on how to install them on the ground. The panels can get attached with a pole mounted system or a standard mount. Standard ground mount solar systems are mounted like rooftop solar in that the solar panels get attached to a metal frame.

How do you install a solar system?

The standard ground-mount system is the easiest and most cost-effective solution for a ground install, and also the most popular. To build a pole-mount solar system, you'll dig a single deep hole in the ground. It'll hold a large pole, upon which you'll connect your rails and mount your solar panels.

Are freestanding solar panels worth it?

Free-standing solar panels are also more prone to damage due to wildlife or people tampering with the equipment. This damage can lead to some expenses over time that you wouldn't get with rooftop panels. Are ground-mounted solar panels worth it?

Ground-mounted systems are a great choice if your roof isn't suitable for solar.

Should I choose a roof or a ground-mounted solar system?

If your roof works for solar and can fit enough solar panels to meet your energy needs, it's usually best to choose rooftop solar panels. If you need a really large system that won't fit on your roof and you have enough open land, opt for ground-mounted panels. Each property is unique.

Should I install ground solar panels on my roof?

Ground solar panels will allow you to unlock the full potential of your solar

panel system and keep power losses to a minimum. Solar modules are pretty heavy, so your roof must be strong enough to handle the additional weight of a photovoltaic system.

Are ground-mounted solar panels a good idea?

Mounting solar panels on the ground instead of on a roof has benefits and drawbacks. A ground-mounted solar system is a free-standing solar array mounted on the ground using either a rigid metal frame or atop a single pole.
