# **Lithium battery pack connected in series with high voltage**

## Overview

---

Series increases voltage (e.g., two 3.7V cells in series yield 7.4V), while parallel boosts capacity (e.g., two 2000mAh cells in parallel provide 4000mAh). Use series for high-voltage devices like EVs; choose parallel for extended runtime in low-voltage systems. How to wire lithium batteries in series?

Lithium batteries are part of our everyday gadgets like phones, laptops, and even electric cars, so knowing how to wire them in series is essential for any practical project. To wire lithium batteries in series to increase voltage, connect the positive terminal of one battery to the negative terminal of the next.

When should a lithium battery be connected in series?

You should connect lithium batteries in series when your device requires a higher voltage than a single battery can provide. For example, if your device operates at 7.4V, connecting two 3.7V batteries in series would be appropriate. This setup is commonly used in applications like electric scooters, drones, or other high-voltage devices.

How many lithium batteries can be connected in series?

For instance, LiTime allows for a maximum of four 12V lithium batteries to be connected in series, resulting in a 48-volt system. It's always important to consult the battery manufacturer to ensure that you stay within their recommended limits for series connections.

Why should a battery pack be connected in series?

Higher voltage output: By connecting multiple cells in series, the overall voltage output of the battery pack increases, making it suitable for applications that require higher voltage. For example, 4 packs of 12.8V battery connect in series, they can provide 51.2 V energy in total.

Can lithium-ion batteries be connected in parallel or in series?

Connecting lithium-ion batteries in parallel or in series is not as straightforward as a simple series-parallel connection of circuits. To ensure the safety of both the batteries and the individual handling them, several important factors should be taken into consideration.

How do you charge a lithium ion battery pack?

When charging a battery pack made up of several lithium-ion cells in series, always use a charger designed for the combined voltage. For example, if you have three 4.2-volt cells in series, you'll need a charger that offers 12.6 volts. Using the wrong charger can damage your cells.
