What is a solar inverter & how does it work?

A solar inverter is one of the most critical components of a solar power system. After harnessing sunlight and converting it into DC power by the solar panels, we still need one crucial step before we can use this power: conversion to AC. That's where the solar inverter comes into play.

Does a solar inverter work with a generator?

The compatibility between your off-grid solar inverter and generator is crucial for a successful hybrid setup. In a typical hybrid system, the solar inverter works by converting the solar energy into usable power for your home, while the generator kicks in as a backup when the energy demands exceed the solar system's output.
