How to calculate power generation cost after installation of energy storage facilities?

The power generation cost of new energy units after the installation of energy storage facilities is as follows: (7)  $C_{NS} = M + P_n \cdot \Delta Q' + S_b + S_{op} = M + P_n \cdot \int \Delta q_{min} \cdot \Delta q_f(q) \cdot q \cdot dq + S_b + S_{op}$  (8)  $S_b = R \cdot Q_{str}$ ,  $S_{op} = N + K \cdot \Delta Q''$  (9)  $\Delta Q'' = \Delta Q - \Delta Q'$ .

Why is energy storage configuration important?

Energy storage configuration is an important part of new energy access system of public charging and swapping stations. 6, 7 Due to the intermittency and instability of new energy power generation, direct access to power grid may affect its stable operation. Therefore, it is imperative to configure an appropriate energy storage system.

How does energy storage affect the cost of energy storage?

When new energy units are equipped with energy storage facilities, the cost of energy storage is hedged against the total amount of penalty, and the output power range increases, so the curve moves from B1 to B3.

Why should energy storage facilities be installed?

For new energy units, proper deployment of energy storage facilities can promote the consumption of excess generation, increase the option of selling electricity in the high price period, participate in the competition auxiliary service market, and improve the return on total life cycle assets.

Does new energy access have advantages?

This paper profoundly studies the new energy access, storage configuration, and public charging and swapping station topology. Analysis shows that new energy access has significant advantages.

Why is energy storage more important than capacity?

An individual new energy supplier's demand for energy storage is often insufficient to support the development of pumped storage power stations, and cooperative development or partial leasing can be adopted. From the perspective of capacity and power, power is more important than capacity when energy storage is mainly used to suppress fluctuations.

## Ratio of new energy access and energy storage
