Which solar inverter is best?

CNET experts have compared the most popular solar inverters' specs, warranties, prices and more. The SolarEdge Home Wave Inverter is our top pick in 2025. It was the most efficient inverter we looked at, letting you use a larger percentage of the energy your solar panels generate. This translates to less and more power to use around the house.

What are the different types of solar power inverters?

There are four main types of solar power inverters: Also known as a central inverter. Smaller solar arrays may use a standard string inverter. When they do, a string of solar panels forms a circuit where DC energy flows from each panel into a wiring harness that connects them all to a single inverter.

What is a solar inverter?

Solar inverters are the heart of any solar energy system, converting the direct current (DC) electricity generated by solar panels into alternating current (AC) power for homes, businesses, or utility grids.

Do I need a solar inverter?

Solar inverters are the operational brain of photovoltaic (PV) systems, making them one of the most important components of a solar system. Since solar panels generate power in DC, which is not useful for most home appliances, you will generally need a solar inverter.

Why are solar inverters important?

When people think about a solar energy system, solar panels are usually one of the first things that come to mind. While solar panels are undeniably important, solar inverters are an equally crucial system component—especially when it comes to creating sustainable energy solutions in homes and buildings around the world.

Which solar panel has a microinverter?

The Q.Tron AC module is actually a solar panel with a built-in microinverter. And, since we named it “Rookie of the Year” in our best solar panels for 2025 ranking, it should come as no surprise that we think they’re the best new inverter on the block too. Q Cells is a well-established solar panel manufacturer.
